SUMMARY

Computer Science undergraduate seeking a Developer Intern role, with hands-on experience building secure, layered backend systems using Java, Spring Boot, and Spring Security. Skilled in REST API design, JWT authentication, and relational database modeling with JPA/Hibernate. Strong foundation in Object-Oriented Programming and Data Structures & Algorithms, with 200+ problems solved on LeetCode. Demonstrated technical leadership through a selective startup accelerator program and multiple 24-hour hackathons.

TECHNICAL SKILLS

Languages: Java, Python, SQL
Frameworks & Libraries: Spring Boot, Spring Security, Spring MVC, Hibernate, JPA
Backend Concepts: REST API Design, JWT Authentication, MVC Architecture, DTO Pattern, Exception Handling, Design Patterns
Databases: PostgreSQL, Relational Database Design
Cloud: AWS (Cloud Fundamentals, Generative AI, Machine Learning Foundations)
Tools & Platforms: Git, GitHub, Docker, Maven, Postman
Testing: JUnit, Unit Testing
Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA)

PROJECTS

- AtlasAI – Agentic Sales Workflow Automation Platform** | *Java, Spring Boot, React, PostgreSQL, Python, Docker* 2026 | [Link](#)
- Architected and deployed a full-stack **microservices CRM automation platform** comprising **6 Spring Boot microservices**, a Python AI agent layer, and a React application with **40+ responsive pages**, containerized with Docker and deployed on Railway.
 - Implemented secure **JWT-based authentication** with Spring Security, role-based access control, refresh token management, paginated REST APIs, advanced search, and centralized exception handling using PostgreSQL and Spring Data JPA.
 - Designed an extensible **AI workflow orchestration framework** using Python, LangChain, and pgvector, featuring specialized CRM, Email, Calendar, and Orchestrator agents for intelligent sales workflow automation.
 - Established CI/CD using GitHub Actions and Docker while diagnosing and resolving **5+ production-level issues** across JWT validation, PostgreSQL schema migration, Railway deployment, and Nginx reverse proxy configuration.
- Event Ticketing Management System** | *Java, Spring Boot, React, TypeScript, PostgreSQL, WebSocket, Docker* 2026 | [Link](#)
- Engineered a full-stack **event ticketing platform** supporting both **per-seat** and **aggregated inventory** models with secure JWT authentication, role-based administration, and an interactive React frontend.
 - Designed a resilient reservation engine implementing a **two-stage HOLD→CONFIRM lifecycle**, optimistic locking with automatic retry, scheduled expiry cleanup, waiting queues, and immutable audit logging to prevent overselling under concurrent bookings.
 - Implemented production-grade backend features including **WebSocket-based real-time seat availability**, Caffeine/Redis caching, Flyway database migrations, Resilience4j circuit breakers, token-bucket rate limiting, and Micrometer health monitoring.
 - Containerized the application using Docker with CI-ready builds, integrated PostgreSQL, comprehensive unit/integration testing using Testcontainers, and deployed the frontend using Vercel

EXPERIENCE

Team Lead & Backend Developer 2025
Startup Accelerator Program

- Selected for a 3-month accelerator after winning a startup pitch competition among 8 teams; **led backend architecture and REST API design** for the team's product.

EDUCATION

GRT Institute of Engineering and Technology, Anna University 2024 – Present
B.E. Computer Science and Engineering CGPA: 8.40 / 10.0

ACHIEVEMENTS

Solved 200+ Data Structures and Algorithms problems on LeetCode; earned the **100-Day Consistency Badge** and January & February Monthly Badges.

CERTIFICATIONS

Relational Database Basics – IBM (via edX)
Java Programming – Red Hat Academy
Data Structures and Algorithms using Java – NPTEL
Web Development Fundamentals – IBM
Developer and Technology Job Simulation – Accenture UK (Forage)
AWS Educate – Introduction to Cloud 101 (Training Badge), Amazon Web Services, Issued Mar 2026
